EDUCATION

Indiana University, Bloomington, Indiana   August 2016
  – *Bachelor of Arts, Computer Science*
  – *Bachelor of Science, Informatics*

WORK EXPERIENCE

Neuralify LLC, Concord, MA   February 2017 - current
Automation Developer
  – Built robotic process automation solutions that completed various customer business processes end to end, eliminating labor costs and human error
  – Deployed hands-on RPA training to clients that covered fundamental automation design and development concepts
  – Aided in development of web applications in PHP that facilitated company training efforts
  – Oversaw the deployment of load-balanced AWS architecture to maintain remote workforce of software robots able to run automation tasks remotely

MacAllister Machinery, Indianapolis, IN   May - August 2015
Software Development Intern
  – Wrote batch scripts in PHP to facilitate transfer of data from AS/400 to new MySQL database
  – Methodically tested new functionality in transaction software and company intranet
  – Worked with Agile team to manage projects and track bugs while participating in code reviews

QUALIFICATIONS

Languages:
  – Proficient in: JavaScript, Java, C++, PHP, SQL, HTML/CSS
  – Familiar with: Python, Ruby, C#, x86 Assembly, Racket/Scheme

Other:
  Git, Node.js, AngularJS, AWS, Rails, Eclipse, Selenium, HP UFT, JIRA, Windows/Linux OS

PROJECTS

Twitter Clone
  – Social networking application built with Ruby on Rails, inspired by Twitter
  – Heroku-deployed, incorporating full user registration, login session, tweet and follow functionality

League of Legends Team Statistics
  – Web application that uses Riot Games' API to scrape eSports professional player data
  – Sorts data from API calls into JSON, caching for later use to counteract rate limiting
  – Makes extensive use of closures, asynchronous callbacks and modular JavaScript through Node.js backend
